Walmart Weekly Sales — Key Insights

Computed from Feb 2010 – Oct 2012 · 45 stores · $6.74B total revenue

AVG WEEKLY FLEET SALES	YOY REVENUE TREND	HOLIDAY LIFT (FLEET)	AT-RISK STORES NOW
$47.1M	-1.2%	+7.1%	6
143 weeks observed	2011→2012 year-over-year	vs non-holiday avg	>10% 8-week decline

1 Revenue risk

Fleet revenue is in a quiet but consistent 2-year decline

$1.2M

weekly revenue lost since 2010 (per week avg)

Average weekly sales fell from **$47.7M** in 2010 to **$46.5M** in 2012 — a drop of ~$1170K per week. Across 45 stores that annualises to roughly **$61M in lost revenue per year**. No single event explains it; the trend is broad and gradual, suggesting structural demand erosion rather than an isolated shock.

Recommended action: Segment this decline by store type and geography. If Type B stores are driving it disproportionately, a format-level intervention is warranted.

2 Concentration risk

Top 10 stores carry 39% of total revenue — a fragile dependency

39.1%

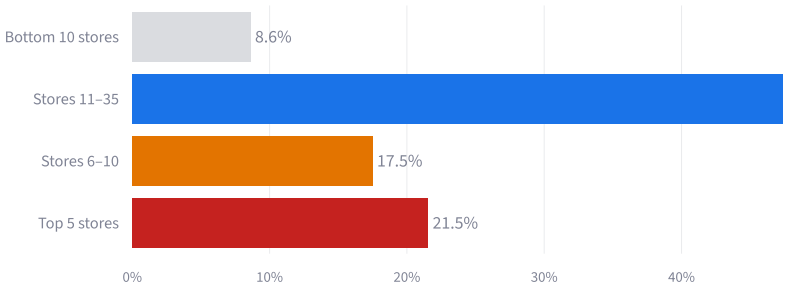
of total fleet revenue from just 10 stores

The top 5 stores — all large Type A — account for **21.5%** of revenue on their own. The bottom 10 contribute only **8.6%**. This means underperformance in two or three flagships can move the fleet total meaningfully in a single quarter.

Stores 20, 4, 14 are the three highest-revenue locations. Operational disruptions, out-of-stocks, or local competition at these stores carry an outsized financial impact.

Recommended action: Create a "Flagship Watch" report that monitors these 10 stores weekly at exec level, separate from the broader fleet review.

REVENUE SHARE — TOP VS BOTTOM STORES



CUMULATIVE REVENUE SHARE BY STORE RANK

3 Counterintuitive finding

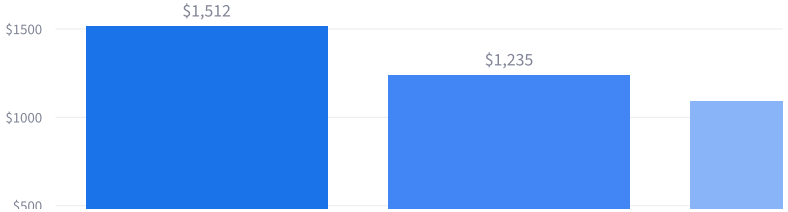
Small stores generate 38% more revenue per square foot than large ones

$1,512/sqft

avg revenue per sqft — small-format stores

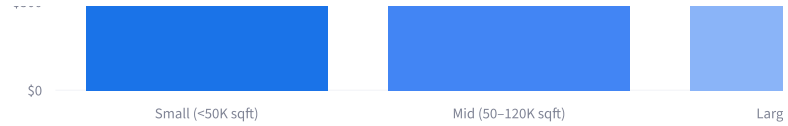
Small-format stores (<50K sqft) produce **$1,512/sqft** vs **$1,092/sqft** for large stores — a **38% productivity premium**. Type C stores are the most space-efficient format overall.

REVENUE PER SQUARE FOOT BY FORMAT SIZE

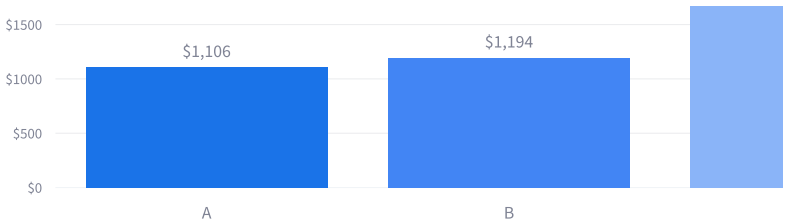


This challenges a "bigger is better" assumption. Large stores carry more absolute revenue but leave proportionally more sales per square foot on the table. Without occupancy cost data this can't be confirmed as a margin story, but it warrants a deeper unit-economics review before any new store approvals.

Recommended action: Run a net margin per sqft analysis including rent and labour. If small formats hold their edge, prioritise them in the expansion pipeline.



REVENUE PER SQFT BY STORE TYPE (A / B / C)



---

4 Seasonality

The post-holiday cliff is the single most violent revenue event in the calendar

-28%

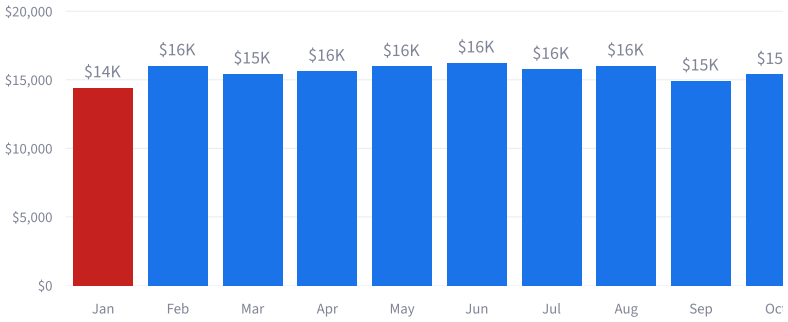
December → January average drop in weekly sales

Thanksgiving week produces a **+46% WoW spike** (Nov 22, 2010) — the largest single-week jump in the dataset. The week after Christmas then collapses by **-50%** (Dec 27, 2010) — the steepest drop in the dataset. Both events occur in consecutive years with near-identical magnitude, confirming this is structural, not random.

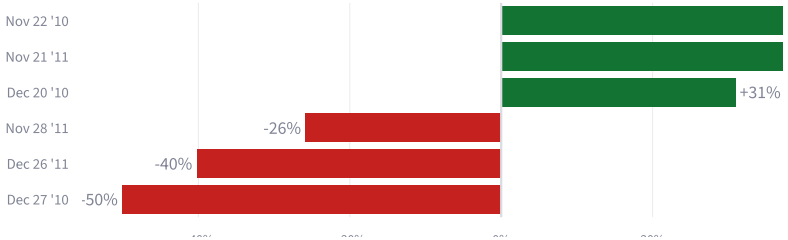
December averages **$20,015/store/week** vs January's **$14,427/store/week**. Inventory purchased for the December peak becomes stranded capital within 2 weeks.

Recommended action: Build explicit post-

AVERAGE WEEKLY SALES BY MONTH



TOP 3 WOW SPIKES AND DROPS



holiday markdown and clearance plans, timed to the week of Dec 27. Staff-down schedules should be prepared 3 weeks in advance.

---

5 Growth opportunity

Three departments drive 19 cents of every dollar — and holiday timing amplifies them further

19.7%

of total fleet revenue from depts 92, 95, 38

Departments 92, 95, 38 together generated **$1.33B** over the full period. These are the highest-leverage departments for in-stock rate improvement, promotional spend, and planogram decisions.

On the holiday dimension, Dept 99 shows a **+303% holiday lift** — the strongest in the fleet. Five departments see holiday lifts above 70%, making them prime targets for seasonal inventory builds and dedicated promotional campaigns.

Recommended action: Prioritise fill-rate SLAs for the top 3 revenue depts year-round. For holiday planning, run dedicated depth-of-inventory reviews for the top 5 holiday-sensitive departments starting 8 weeks before Thanksgiving.

! Immediate action

6 stores showing >10% 8-week sales decline as of Oct 22, 2012

6

stores with 8-week trend below −10%

4 Type B, 2 Type A stores are currently in decline, with the steepest being Store **7** at **-15.5%** over 8 weeks.

Four of the six are Type B mid-format stores — suggesting this may be a **format-level challenge**, not isolated store execution.

Recommended action: Pull weekly store manager reports for these locations immediately. Cross-reference with local competitor activity, out-of-stock rates, and staffing levels. Use the At-Risk page to monitor their risk scores week by week.
